### *Drawings*

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,3-5 and 6 rejected under 35 U.S.C. 102(b) as being anticipated by Jeong et al US Pat. 6,094,103.

Jeong et al disclose an oscillator comprising a first oscillator stage 310 having a first oscillator stage first input Via1-, a first oscillator second input Via1+ and a first oscillator stage output V1+; a second oscillator stage 320 having a second oscillator stage input Vi2- and a second oscillator stage output V2+ wherein the first oscillator stage output V1+ is input to the second oscillator input Vi2- and wherein the second oscillator stage output V2+ is fed back to the first oscillator stage second input Via1+; a third oscillator stage 330 having a third oscillator stage input Vi3- and a third oscillator stage output V3+ wherein the second oscillator stage output V2+ is fed to the third oscillator stage input Vi3-. The oscillator further comprises a fourth oscillator stage 440 (see figure 4). The oscillator stages are single ended. The phase relationship of signal being fed to the first oscillator stage first input and the first oscillator stage second input

is such that the total input of the first oscillator is enhanced. (See column 1 line 38 through line 49; column 8 line 59 through column 12 line 42 and column 14 line 5 through line 29 and figures 3A, 4 and 7)

Joeng et al disclose a oscillator comprising a plurality of oscillator stages each having a first oscillator stage input and a second oscillator stage input wherein an output of each first oscillator stage is input to the second oscillator stage of a following stage and wherein each first oscillator stage input utilizes MNOS transistor (741 731 721) and wherein the second oscillator stage input utilizes PMOS transistor (711 712).

***Allowable Subject Matter***

Claim 2 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: With regards to claim 2, the prior art of record does not disclose or fairly teach the oscillator stage being LC tank oscillators.
